

Median and 90th Percentile Waits for Surgery in Saskatchewan by Region and Month of Surgery

Notes

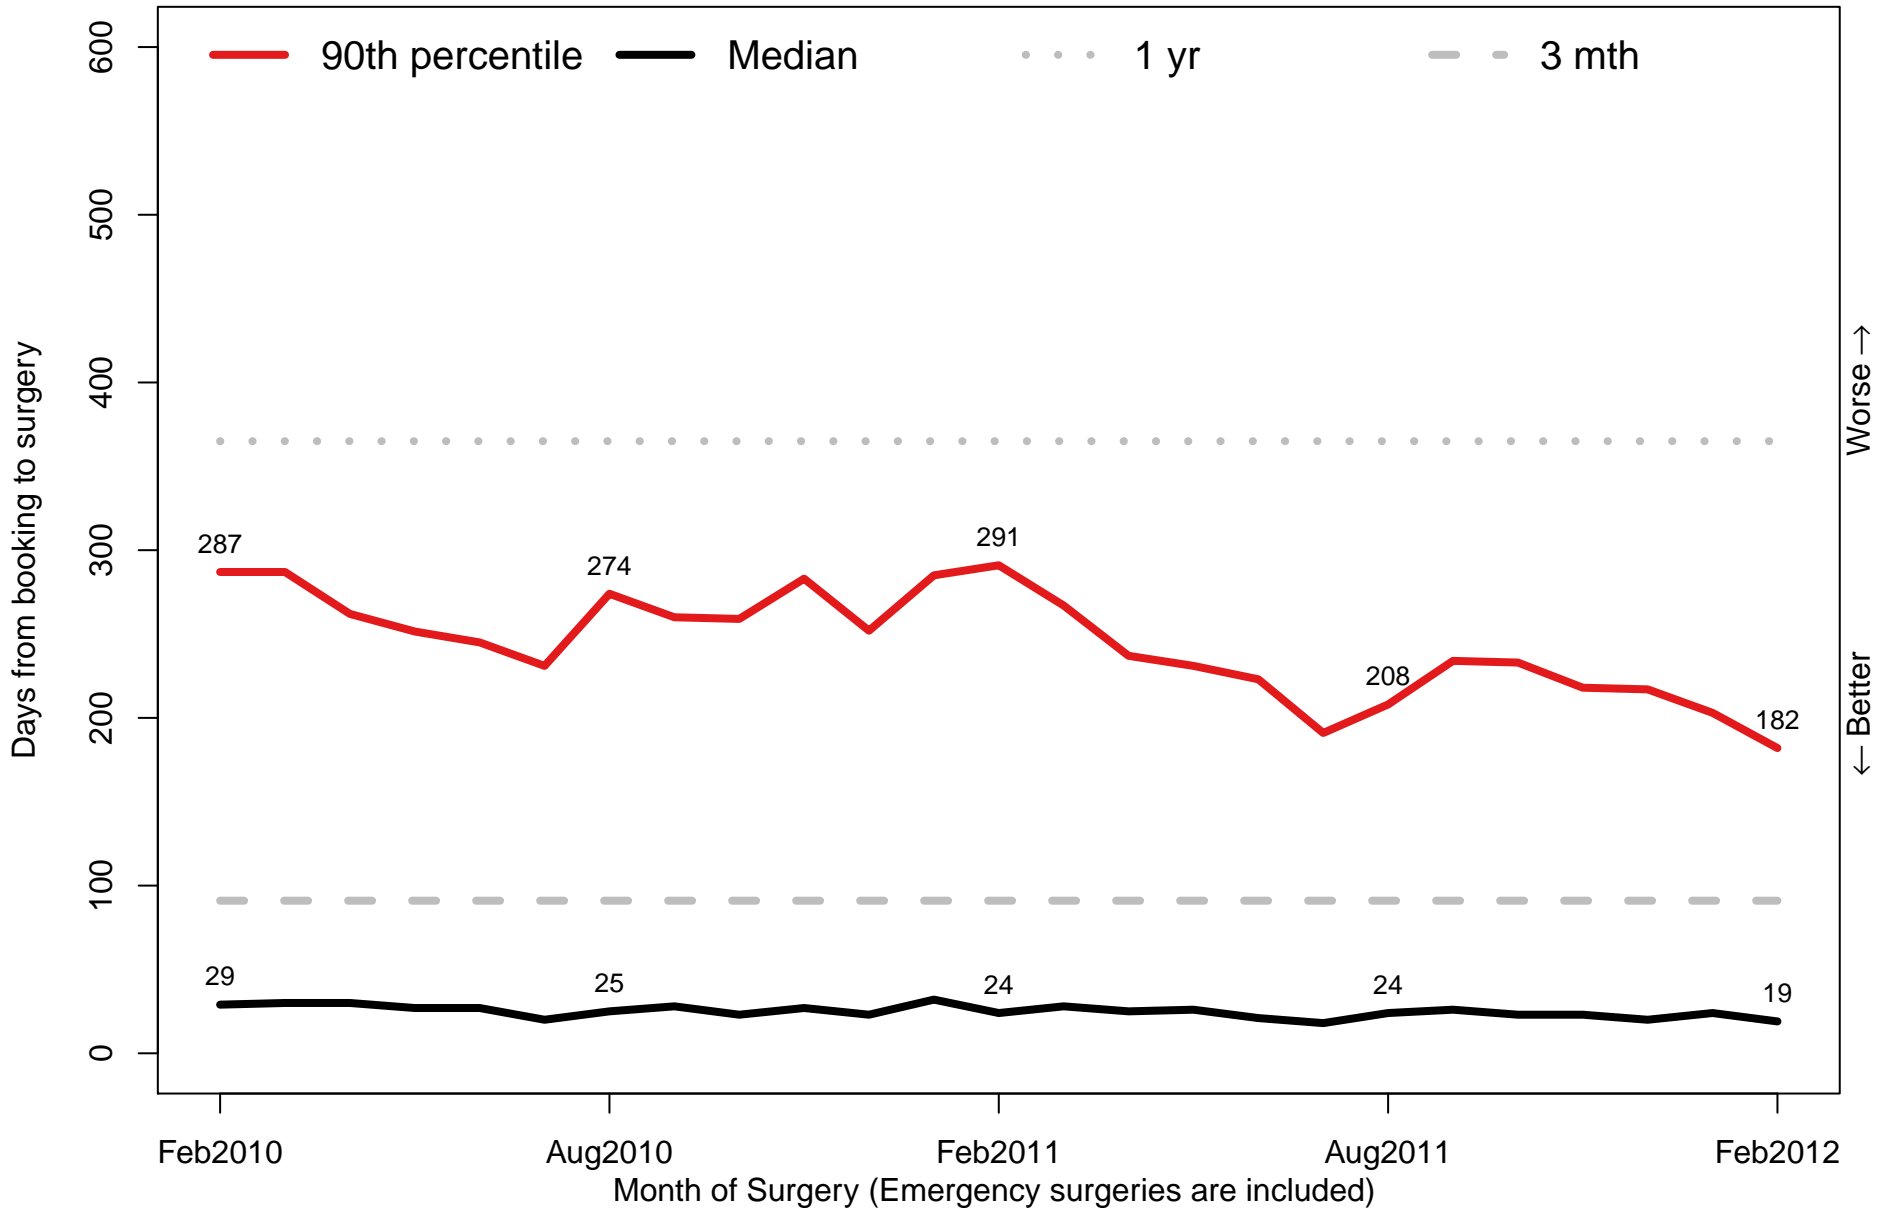

- The following graphs show the median wait time and the 90th percentile wait time for surgeries performed in Saskatchewan operating rooms. Results are shown by month of surgery for each health region and the province as a whole.
- Results are based on the 01Apr2012 refresh of the surgical patient registry data mart.
- The wait time calculation is based on the booking date and the date of surgery. Patient unavailable days are subtracted from the wait time.
- The red line shows the 90th percentile which is the time (in days) by which 90% of people had surgery. The black line shows the median wait time (50th percentile) which is the time (in days) by which 50% of people had surgery.
- The grey dashed lines are guidelines plotted at 3 months (91 days) and 1 year (365 days).
- Two versions of the calculations are presented: one includes emergency surgeries and the other excludes them.
- Records with invalid wait times (missing booking or surgery performed date or booking date after the surgery date) are excluded from the calculations.
