

Number of Cases Waiting at Month End by Time Already Waited

Notes

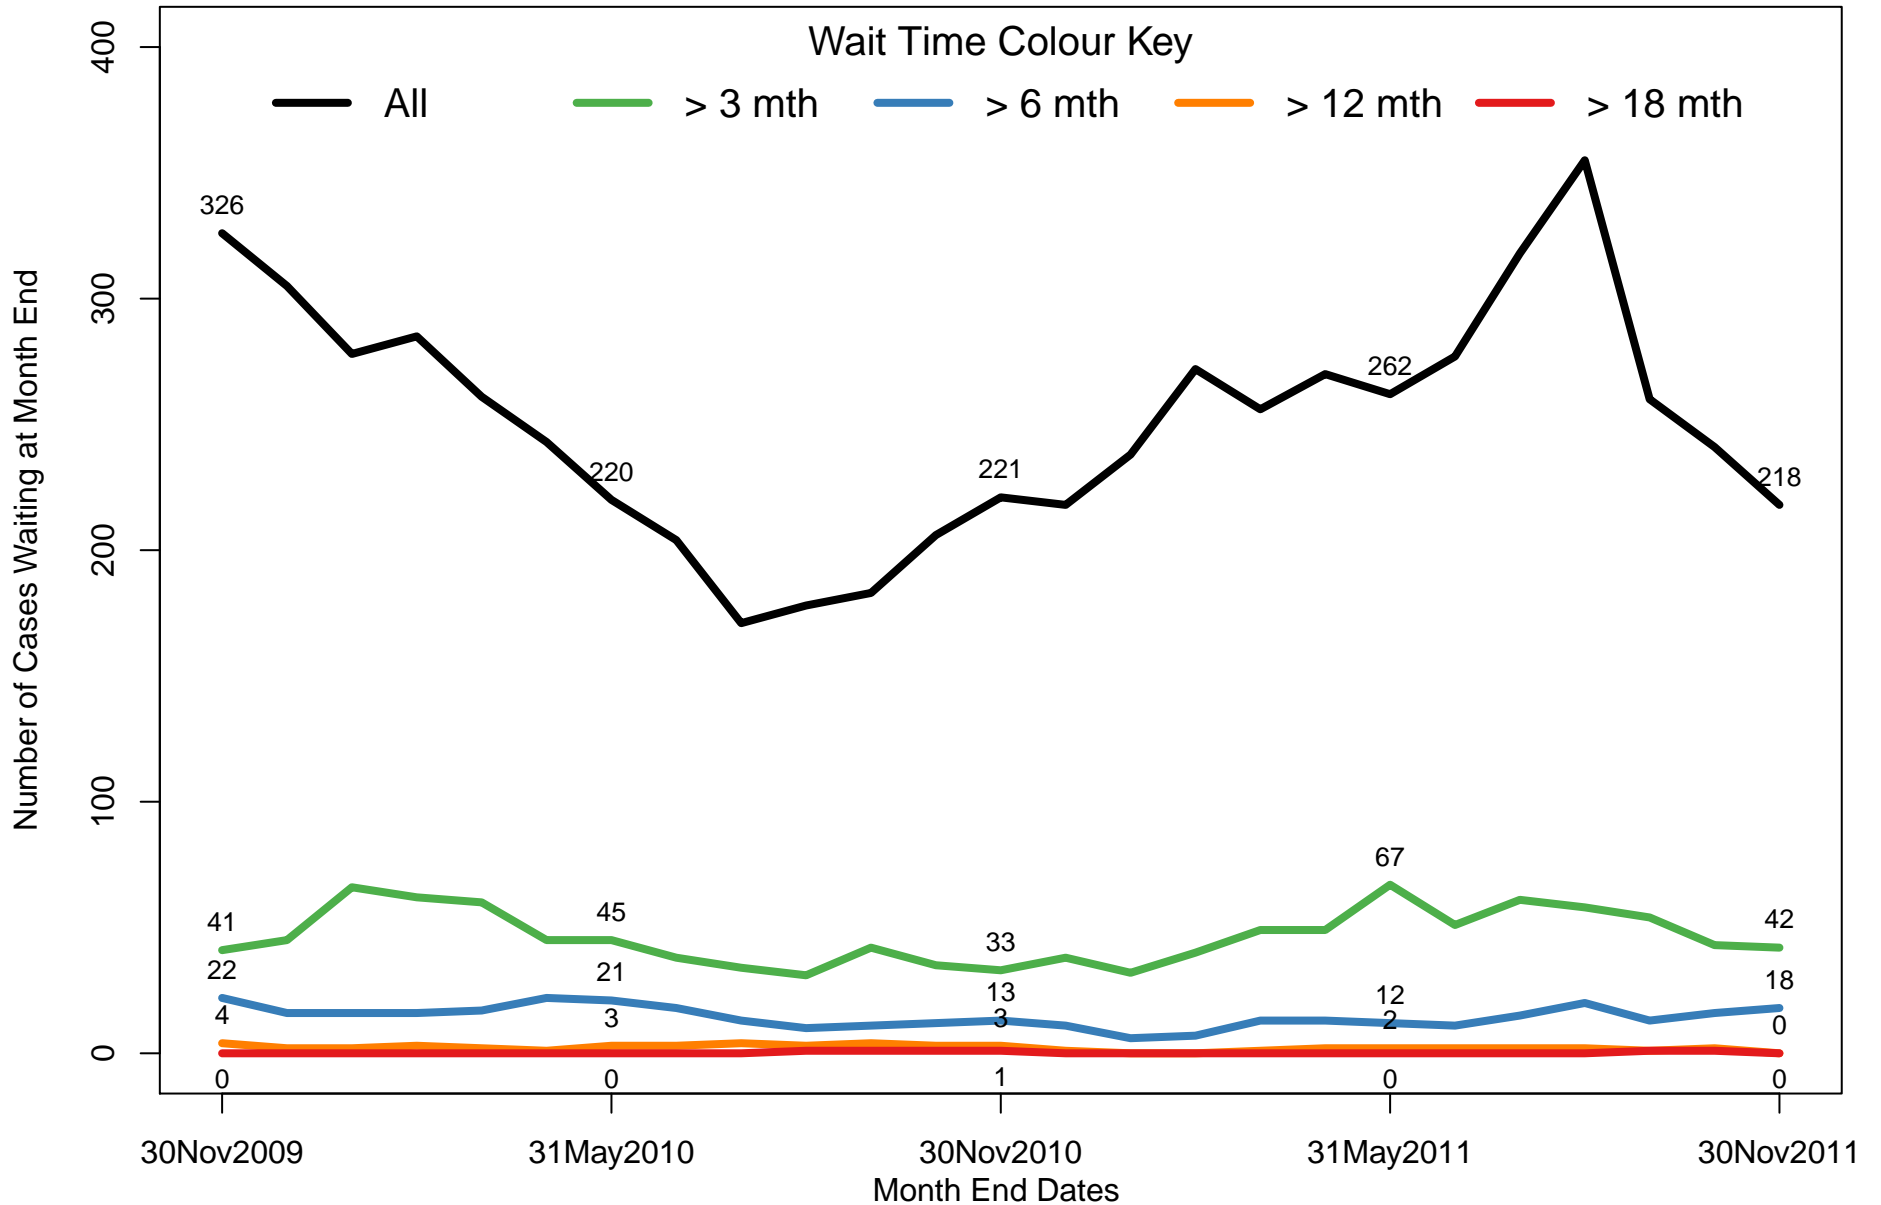

- The counts are of the number of patients waiting for surgery in Saskatchewan operating rooms by region and for the province as a whole. Trends are shown for snapshot dates at the end of each month.
- Results are based on the 01Jan2012 refresh of the Saskatchewan surgical patient registry.
- The wait time calculation is based on the booking date and the last day of each month. Patient unavailable days are subtracted from the wait time.
- The black line shows the total number of patients waiting at the end of each month. The green line shows the number of patients that had already waited greater than three months. The blue line shows the number of patients that had already waited greater than six months. The orange line shows the number of patients that had already waited greater than twelve months. The red line shows the number of patients that had already waited greater than eighteen months. Please note, for example, that the counts of patients that had already waited longer than twelve months includes patients that had already waited more than eighteen months.
