Total†	248	74%	20%	5%	1%	0%	31

* Number of cases performed in other regions: Prince Albert Parkland (21); Five Hills (16); Prairie North (11); Sunrise (12); Cypress (9);

† 90% of cases were performed within 34 days (4.9 weeks).

Notes

- Most of these procedure are performed by general surgeons, but they may also be performed by urologists.
- Cancer surgery data is based on procedures performed in hospital operating rooms. 51% of all bowel/colon/rectum resections performed in operating rooms over this time period were categorized as cancer surgeries. Only cancer surgeries are included in this table.
- The data includes procedures that are performed for both invasive and slower growing cancers. 92% of bowel/colon/rectum resections reported as cancer cases were categorized as invasive with a target time frame of three weeks and the rest were categorized as slower growing cancers with a target time frame of three months. Emergency procedures and procedures performed for routine screening or scheduled follow-up are excluded. Some further work has to be done to ensure that the cancer categories are being consistently interpreted.
- Time periods where patients specify that they are unavailable for surgery are subtracted from the wait time.
- Postponed cases are included, regardless of whether the reason for postponement is patient or system-related.
- The results are based on the January 1, 2012 refresh of the Saskatchewan Surgical Patient Registry data mart and are subject to minor changes as data is added or corrected.
